

To block the VRRP multicast packet on DGS36xx, you can use the CPU\_interface\_filtering function. Below is the configuration example.

>Network topology:

VRRP multicast packet(224.0.0.18)-->(P1)DGS3627

>CPU Access Profile Configuration:

```
-----  
create cpu access_profile profile_id 1 ip destination_ip_mask 255.255.255.255  
config cpu access_profile profile_id 1 add access_id 1 ip destination_ip 224.0.0.18 port 1 deny  
enable cpu_interface_filtering  
-----
```
