

How to use Cable Diagnostics via SNMP on DES-3200 C1 R4.00

Example:

1. Cable diagnostics only works on one port at a time. Before a user wants to check the cable info on a port, he/she has to run the function on that port first for one time.

Run cable diagnostics on port 13:

`cable_diag ports 13`

```
C:\snmpset -c private -v 2c 10.90.90.90 1.3.6.1.4.1.171.12.58.1.1.1.12.13  
i 1
```

2. After the function has been run, the results are available. A user can check the results of different categories such as pair2 status, pair3 status, pair4 length, etc. Each category has a separate OID. Please refer to the following snapshots for each category.

Check the status of pair2 of port 13:

```
C:\snmpwalk -c private -v 2c 10.90.90.90 1.3.6.1.4.1.171.12.58.1.1.1.5.13
```

Check the status of pair3 of port 13:

```
C:\snmpwalk -c private -v 2c 10.90.90.90 1.3.6.1.4.1.171.12.58.1.1.1.6.13
```

Check the length of pair3 of port 13:

```
C:\snmpwalk -c private -v 2c 10.90.90.90 1.3.6.1.4.1.171.12.58.1.1.1.10.13
```

The screenshot displays a MIB browser interface. On the left, a tree view shows the hierarchy: iso > swCableDiagMIB > swCableDiagCtrl > swEtherCableDiagTable > swEtherCableDiagEntry. Under swEtherCableDiagEntry, various OIDs are listed, including swEtherCableDiagPortIndex, swEtherCableDiagPortType, swEtherCableDiagLinkStatus, swEtherCableDiagPair1Status, swEtherCableDiagPair2Status, swEtherCableDiagPair3Status, swEtherCableDiagPair4Status, swEtherCableDiagPair1Length, swEtherCableDiagPair2Length, swEtherCableDiagPair3Length, swEtherCableDiagPair4Length, swEtherCableDiagAction, and swEtherCableDiagStatus. On the right, the properties for the selected object (swCableDiagCtrl) are shown:
